EDUCATION

Arizona State University

Jan 2024 – Dec 2025

Master of Science in Computer Engineering; GPA: 3.9/4.0

Tempe, AZ

• **Coursework:** Software Security, Data Processing at Scale, Data Mining, Generative AI, Data Visualization, Semantic Web Mining

COEP Technological University

Aug 2017 – May 2021

Bachelor of Technology in Electrical Engineering; Minor in Mathematics

Pune, India

• **Coursework:** Data Structures & Computer Programming, Information Systems, Digital Electronics, Control Systems Engineering

PROFESSIONAL EXPERIENCE

FinancialEdU Inc.

Mar 2026 – Present

Software Developer Intern

Remote, USA

- Engineered **5+ backend REST APIs** in **Java** and **Spring Boot** powering quiz workflows, lesson delivery and XP-based gamification on an **AWS-hosted financial literacy platform**, with structured validation and role-based access control.
- Built **4+ reusable React components** for interactive lesson modules, budget calculator, loan planner and savings tracker dashboards, improving user engagement through real-time feedback and progress visualization.
- Reduced feature development time by **40%** using **GitHub Copilot**, **Claude Code** and **Cursor** for AI-assisted code generation, debugging and test validation across full-stack features.
- Built **FinAI** chatbot with **LangChain**-powered **RAG** over structured financial literacy content and **LangGraph** for session-aware conversation flow, enabling context-persistent Q&A across beginner-to-expert learning tiers.

Bajaj Finance Ltd.

Jul 2021 – Oct 2023

Software Engineer

Pune, India

- Delivered **20+ backend and frontend enhancements** by building **React-based UI components** and **Flask REST APIs** for workflow automation, improving operational efficiency by **18%** for **75K+ internal collection users**.
- Led migration of core financial systems for **20M+ accounts** using **SQL-based data consistency validation** and **Python-based reconciliation scripts**, ensuring **zero downtime** and enabling a **30% increase in transaction throughput**.
- Automated settlement and loan closure workflows using **Python** and **Flask**, reducing processing time from **2 days** to near **real-time** through payment matching and auto-closure logic while achieving **100% regulatory compliance**.
- Built monitoring dashboards for **7 debt management processes** using **Python** and **SQL**, reducing troubleshooting time by **14+ hours/month** and improving system observability across critical collection workflows.
- Validated **300+ regression and API scenarios** using **PyTest**, **Selenium** and **Postman**, reducing production defects by **35%**.
- Integrated automated validation and deployment checks into **Jenkins** and **Azure DevOps** pipelines for **Flask** and **FastAPI-based backend services**, reducing failed deployments by **40%** and shortening release cycles.

VI Solutions

May 2020 – Jul 2020

Software Engineer Intern

Remote, India

- Developed **8+ REST APIs** in **Java** and **Spring Boot** to support data acquisition and process automation for **industrial IoT systems**, reducing data ingestion errors by **25%** through structured validation, authentication and rate limiting.
- Built **React dashboards** for real-time monitoring and configuration of **4+ automated sensor data pipelines**, cutting manual oversight effort by **~6 hours/week** for the operations team.
- Reduced manual QA effort by **30%** across **3+ IoT sensor workflows** by building a **Python-based anomaly detection** and data validation pipeline, eliminating **8 hours/sprint** of manual checks, aligning with **ATE (Automated Test Equipment)** standards.

PROJECTS

IoT Edge-Based Elastic Face Recognition on AWS

- Built an **IoT edge-to-cloud face recognition pipeline** using **AWS IoT Greengrass**, **MQTT**, **Lambda**, **ECS** and **SQS**, achieving **100% request success rate** and **<0.8s average latency** under elastic load.
- Leveraged **GitHub Copilot** to scaffold **Flask APIs** and generate test cases, accelerating development by **~50%** while maintaining end-to-end pipeline reliability.

momAI - Culturally-Aware Nutrition Assistant | 2nd Place - Hacks for Humanity

- Built a **full-stack AI nutrition assistant** with a **React** interface for chat, recipe exploration, meal planning and nutrition tracking, backed by **Python** services for recommendation logic and data processing.
- Improved meal recommendation relevance by **30%** using **Claude API**, **LangChain** for tool-augmented retrieval and **LangGraph** to persist user state - cultural preferences, liked recipes and dietary goals - across multi-turn conversations.

TECHNICAL SKILLS

Programming: Python, Java, JavaScript, TypeScript, SQL, HTML, CSS, Bash

Frameworks: Spring Boot, React, Flask, FastAPI, LangChain, LangGraph, REST APIs, Microservices

Databases: MySQL, PostgreSQL, MongoDB, DynamoDB, Redis

Tools: AWS (Lambda, ECS, S3, SQS, SNS, EC2, RDS, IoT Greengrass, API Gateway, CloudWatch), Docker, Grafana

Testing & QA: PyTest, Selenium, Postman, Swagger, API Testing

CI/CD & DevOps: Jenkins, Azure DevOps, GitHub Actions, Git

AI-Assisted Development: GitHub Copilot, Claude Code, Cursor

Fundamentals: Software Development, Object-Oriented Design, Distributed Systems, Cloud Computing
